

The NW Energy Coalition invites you to the fall 2018 Clean & Affordable Energy Conference!

Featuring Oregon's largest electric and natural gas utilities describing their **strategies for deep decarbonization**. Is what they are proposing enough and can we accelerate decarbonization in a way that doesn't leave people behind?

Conference panels will explore:

- **Energy Storage:** the promise for the Northwest power system
- **Energy Efficiency:** the health, quality of life, and consumer benefits
- **Bonneville Power Administration:** the opportunities and challenges for BPA in helping the West develop more clean energy resources

The Clean & Affordable Energy Conference is a place to learn, to connect with advocates and policymakers, and to make your voice heard.
